

5 FACTORS of VIDEO VIEWABILITY

Similar to what's happening in [display advertising](#), there's a shift underway from served to viewable impressions for video ads. By transacting only on videos that are viewable, advertisers can ensure that their ads are seen, and as a result, they can enhance their return on investment (ROI). To better understand the current state of video ad viewability on YouTube and across the web, we analyzed our DoubleClick, Google, and YouTube advertising platforms using [Google's Active View](#) measurement technology. Here we explore the factors that help determine video viewability.

Video Viewability Rate:

Percentage of viewable impressions out of the total number of viewable plus non-viewable impressions.

WHAT COUNTS AS VIEWABLE? A video ad is viewable **when at least 50% of the ad's pixels are visible on a screen for at least two consecutive seconds**, as defined by the Media Rating Council (MRC), in conjunction with the Interactive Advertising Bureau (IAB).

1 State of Video Ad Viewability

For **YouTube**, video viewability for web across devices and apps is significantly higher at **91%***

But even ads that are not viewable but audible only on YouTube impact brand lift. Users exposed to YouTube ads that are only heard and not seen had 33.1% more ad recall compared to those who didn't experience the ads at all (control).

*Includes desktop, mobile web, and apps.

2 Device Matters

Video ads are significantly more viewable on mobile and tablet devices than on desktop.

The world is moving to mobile devices.

At **YouTube** over half of all views now come from mobile. And on mobile devices across both web and app, YouTube exhibits an even higher viewability at **94%.**

3 Why Ads Aren't Viewable

So what happens to the ads that are not viewable? Here's why ads don't meet the viewability criteria.

76% of non-viewable ads were never on screen. They were in a background tab or not on the screen at all.

24% of non-viewable ads were scrolled off-screen or abandoned in fewer than two seconds.

4 Player Size Matters

Amongst the most popular video ad players across the web, larger player sizes are more viewable.

#2 most popular ad size by volume
